                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                          This polypeptide sequence comprises the heavy chain variable region (VH) of monoclonal anti-idiotype antibody 11D10 produced by hybridoma cell line ArCC 12020. I1D10 was obtained by immunising naive mice with MC-10 anti-HWG antibody to obtain an anti-idiotype response. It elicits an immune response against a specific epitope of a high mol.wt. mucin of human milk fat globule (HMFG). It induces an immunological response to HMFG in mice, rabbits, monkeys and patients with advanced HMFG-associated tumours. Pharmaceutical compositions and vaccines comprising IlD10, IlD10 polypeptides and/or IlD10 polypuclectides (see also ART85149-50) are claimed. Also claimed are diagnostic kits and methods of using IlD10, IlD10 polypeptides and/or IlD10 polynuclectides; including methods of polypeptides and/or IlD10 polynuclectides; including methods of method of palliating HWFG-associated disease and in claimed kits to detect or quantify anti-HWFG antibody.

(Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                 This sequence represents the heavy chain variable region of the murine antibody 11D10. This anti-idiotype antibody is used to delay the development of, or treat, a human milk fat globule (HWFG) associated tumour in an individual having low tumour burden. The antibody 11D10 is used to prevent the recurrence of HMFG-associated tumours e.g. ovarian, non-small cell lung and pancreatic carcinoma, especially for treating breast tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ö

/note= "Mature murine 11D10 antibody heavy chain variable
region"
                                                                The invention comprises a method for delaying the development of, or treating a tumour that is associated with human milk fat globules (HMFG) or carcinoembryonic antigen (CEA). The method of the invention involves administering an anti-idiotypic antibody for HMFG (e.g. 11D10), and an anti-idiotypic antibody for CEA (e.g. 3H1). The method is useful for delaying the development, of or treating HMFG/CEA-associated tumours. The present amino acid sequence represents the heavy chain variable region of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The OK3T heavy chain sequence was deduced from the cDNA sequence isolated from a library prepared from OK3T producing cells. The library was screened with a probe complementary to a region in the mouse IgGa constant domain region. The OK3T sequence was used in CDR-grafting experiments to prepare humanised antibodies. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New humanised antibodies comprising CDR grafted antibody - with heavy and light chains, for use in in vivo therapy and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 468;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a transgenic, non-human animal with its genome altered to constitutively express a molecule having a constant region which can bind an IgE receptor on mast cells in the animals, the molecule having an immunoglobulin structure and being further capable of specifically binding a predetermined antigen. The transgenic animal is substances i.e. with antiallergic activity and the ability of substances i.e. with antiallergic activity, to affect any allergic reaction caused in the animal by the administration of the antigen to the animal, and applying the substance to be evaluated. The present sequence is the mouse immunoglobulin E (IGE) heavy chain, given in

Sequence carries the variable region of the chimeric immunoglobulin sequence. The antibodies are useful in passive immunisation avoiding negative immune reactions. They are also useful in assaying and in vitro
                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the 2H7 antibody. The 2H7 cDNA was used in the preparation of a novel polynucleotide molecule encoding an Ig fragment. The DNA molecule compities 2 DNA sequences encoding 2 pectate lyase excretion signal sequences respectively linked to a DNA sequence encoding an Ig Fd molecule or Ig light chain, operably linked to a single prokaryotic promoter so as to form a dicistronic transcription unit, provided that the Ig fragment can bind an antigen and is producted and secreted by an E. coli host cell when the nucleic acid molecule is expressed in the host cell. The nucleic acid molecule is used for the production of recombinant antibodies, which can be used for passive immunisation without negative immune reactions (e.g. serum sickness and anaphylactic shock), in labelled forms as immunoassay or imaging caequents, in complement mediated lysis and for therapeutic agent. Cupdated on 25-MAR-2003 to correct PF field.)

This sequence represents the heavy chain variable region of the 2H7 mouse monoclonal antibody. The 2H7 antibody recognises the human B-cell surface antigen Bp35, which plays a role in B-cell activation. This sequence was used in a human-mouse chimeric antibody with human B-cell antigen specificity, that was produced using the method of the invention. The method of the invention is for the production of a protein in a Gram-negative bacterium. The method improves on current techniques, by using a vector including DNA encoding the pectate lyase signal sequence (see AAT51034), attached to the sequence encoding the protein for production. The method is especially used to make immunoglobulins (Ig), particularly those with a human constant region, suitable for passive immunisation (without risk of serum sickness or anaphylaxis) or for in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vivo/in vitro diagnosis and imaging. The Ig may also be used therapeutically, optionally coupled to toxins, etc. Alternatively the protein to be produced is the sweetener thaumatin. The presence of this signal sequence means that the protein is exported from the cytoplasm and can be recovered from the culture medium or periplasm, in active and correctly folded form. The method allows the class of any antibody to be switched, e.g. most human-human Ig are of M class, easily reduced and aggregated, and these can now be changed to G, A or E classes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MGFSRIFLFLLSVTTGVHSQAYLQQSGAELVRPGASVKMSCKASGYTFTSYNMHWVKQTP 60
binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the gradment, under conditions so that the ig fragment is produced and secreted. The nucleic acid molecule comprises DNA sequences encoding: (a) pectate lyase secretion signal sequence operably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) pectate lyase secretion signal sequence operably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a single prokaryotic promoter to form a dicistronic transcription unit. The method is used to produce chimeric Fab molecules, e.g. derived from murine monoclonal antibodies of against human B-cell surface antigen. The invention provides a novel approach for producing genetically engineered antibodies of desired variable region specificity and constant region properties. The cloned Ig gene products can be produced by expression in genetically engineered organisms. The application of chemical gene synthesis, recombinant DNA cloning and production of chemical gene synthesis, recombinant by provides an effective solution for the efficient large scale production of human monoclonal antibodies. The invention also provides a solution to the problem of class switching antibody molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MECSWVFLFLLSITTGVHSQAYLQQSGAELVRSGASVKMSCKASGYTLTSYNMHWVKQTP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence was used in the development of a novel method for the production of an immunoglobulin (Ig) fragment capable of binding an antigen. The method comprises culturing an E. coil host that has been transformed with a nucleic acid molecule encoding the ind secreted. The nucleic acid molecule comprises DNA sequences and secreted. The nucleic acid molecule comprises DNA sequences encoding; (a) pectate lyase secretion signal sequence of inked to a DNA sequence encoding at least the variable region of in Ig A molecule; and (b) pectate lyase secretion signal sequence operably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a single proxaryotic promoter to form a dicistronic transcription unit. The method is used to produce chimeric Fab molecules, e.g. derived from murine monoclonal antibody 2H7 raised against human B-cell surface antigen. The invention provides a cover approach for producing genetically engineered antibodies of desired variable region specificity and constant region of chemical gene synthesis, recombinant DNA cloning and production of chemical gene synthesis, recombinant DNA choning an effective specific Ig chains in various organisms. The application of chemical constant into the efficient large scale production of human monoclonal antibodies. The invention also provides a solution to the problem of class switching antibody molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for the production of an immunoglobulin (Ig) fragment capable of binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the Ig fragment, under conditions so that the Ig fragment is produced and secreted. The nucleic acid molecule comprises DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    novel method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Production of recombinant immunoglobulin fragment – comprising Fd molecule and light chain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4 ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                solution for the efficient large scale production of human monoclonal antibodies. The invention also provides a solution the problem of class switching antibody molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 565; DB 19; Length 140;
Pred. No. 5.6e-36;
6; Mismatches 18; Indels
immunoglobulin fragment production; Ig fragment production; monoclonal antibody 247; human B-cell surface antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence was used in the development of a

The present sequence represents the mouse antibody 2H7 heavy chain variable region. Antibody 2H7 is specific for human B-cell antigen. The antibody sequence was used to construct a chimeric human-mouse antibody in the course of the Invention. The chimeric antibody is expressed in a secretion vector comprising a pelb pectate lyase secretion signal producing a protein such as a chimeric antibody in a bacterial host. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pelB pectate lyase signal sequence - and vector for expression of secreted proteins in Gram-negative bacteria
